

The Future is Now!

The Next Generation of Power App Development

Keith Atherton

Intro

Keith Atherton

- Power Platform & AI Architect
- Professional developer
- Over 25 years experience
- Microsoft MVP for Power Apps
- Microsoft Certified Trainer (MCT)
- LinkedIn Learning Instructor
- 11x Microsoft certified
- *Power Platform Community High Five* user group leader
- *Women in Power (Platform)* mentoring program mentor
- *On Air in the Cloud* podcast host

👋 Who joined my Baltic Summit workshop with Neil last year?

This workshop has SOLD OUT!

Me: *I can run a workshop with 20 people*

Organisers: *Hmm... can we make it 25?*

Me: *Sure, but any more would be crazy*

Organisers: *We've found a bigger room,*

can we make it 30?

Me: *30 but no more, ok? Promise?*

Organisers: *Sure thing, Keith*

...

Organisers: *Is 36 ok...?*

Me: *Michal, what are you doing to me??*

Room E 24.09.2026 09:00 17

[Sold out] The Future is Now! The Next Generation of Power App Development Workshop

The future of app development isn't coming... it's already here. And it's moving fast.

In this hands-on workshop, you'll dive into the next generation of Power Apps development - where traditional boundaries between low-code and pro-code are disappearing, and AI is changing how everything gets built.

We'll start with the foundations - canvas apps and model-driven apps - and quickly move beyond them into the new wave of capabilities reshaping the platform. You'll get hands-on experience with model-driven app generative pages, explore emerging concepts like code apps and vibe apps, and see how AI can take you from idea to working solution faster than ever.

This is not a sit-back-and-watch session. You'll build. A lot.

Agenda

Start time	End time	Description
09:00	09:15	Intro
09:15	10:30	Session 1 – Generative Pages
10:30	10:45	Break
10:45	12:00	Session 2 – Vibe Experience
12:00	13:00	Lunch
13:00	14:30	Session 3 – Code Apps
14:30	14:45	Break
14:45	15:45	Session 4 – Hackathon
15:45	16:00	Wrap-up and Q&A

If anyone gets sleepy... I've got Scottish chocolates!

#FirstComeFirstServed

Housekeeping

- We are not expecting a fire alarm today
- If you hear the fire alarm, exit where you entered. Quickly
- Wi-Fi: PPNT Gdynia
- ⚠️ If you have not sent me your name & email, send to keith.atherton@outlook.com ASAP so I can add you to the Teams call
- Questions are good! If you have any, please raise your hand 🖐️
- If you need help, ask me or any of my wonderful helpers!
- There will be quizzes and a hackathon (and prizes 🏆 🏆 🏆 🏆)
- You will have instructions on how to save and download your work at the end
- If you don't complete the labs today, don't worry – you will have access to the lab instructions and environments after today
- Any questions before we start?

👉 Who builds model-driven apps and canvas apps?

Generative Page example 4/5: Project dashboard

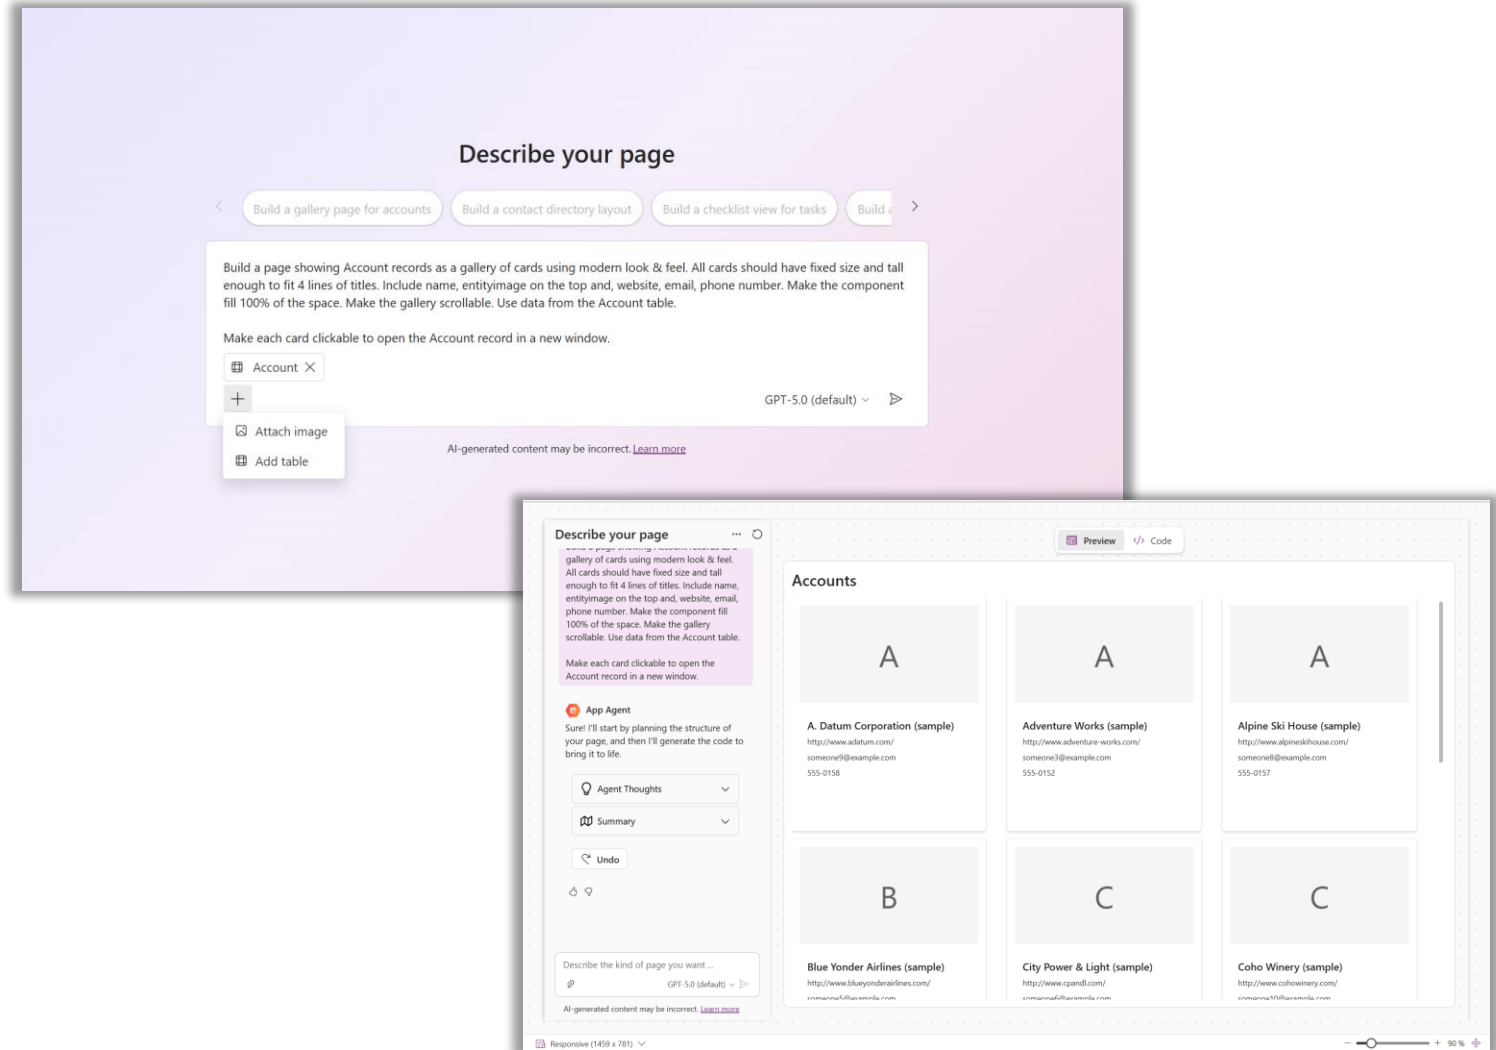

Generative Page example 5/5: Flight simulator!

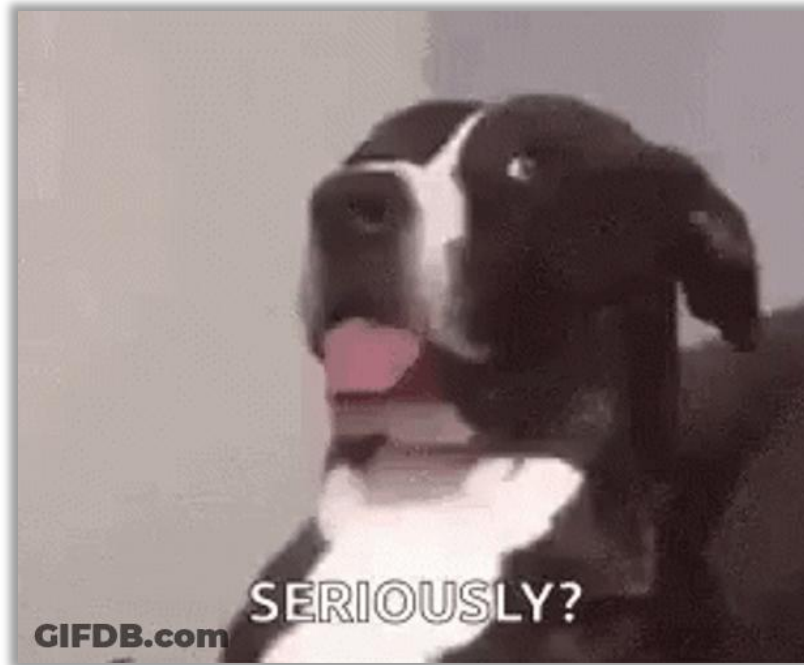

What are Generative Pages?

- Use natural language to build a *generative page* that's created using AI
- They create pages fast!
- Connect to Dataverse data
- You can attach an image containing your UI design
- Creates a React page, code can be edited
- Generally Available as of November 2025.

Generative Pages demo

[Note to self: are you really going to do a live demo using AI???)

Lab 1

Breaktime for PowerPoint by Flow Simulation Ltd.

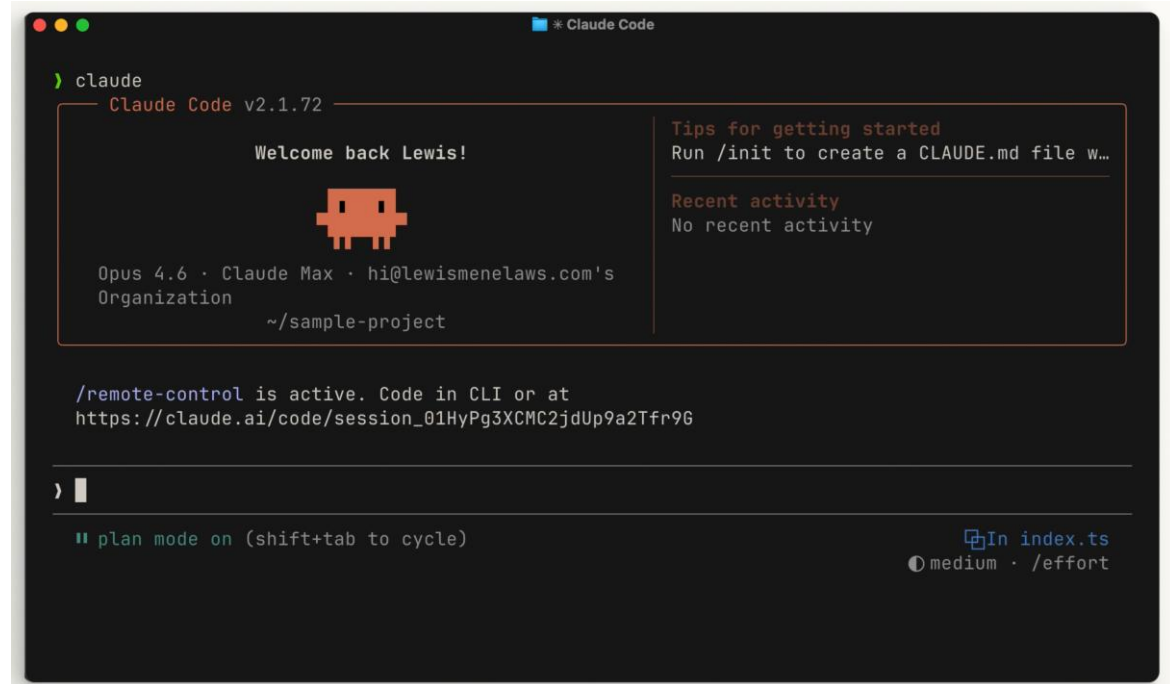

Show Settings ☐

Two teal squares of different sizes are positioned in the top-left corner of the slide.

What do you think of Generative Pages?

There is another way to create Generative Pages...

- What we just saw was the “maker experience”
- You can use your own AI code generation tools such as GitHub Copilot CLI or Claude Code
- Microsoft recommend this approach
- Bringing your own AI model may be more powerful than the maker experience model (GPT-4.1)... but will cost you tokens.

```
> claude
Claude Code v2.1.72

Welcome back Lewis!

Opus 4.6 · Claude Max · hi@lewismenelaws.com's Organization
~/sample-project

/remote-control is active. Code in CLI or at
https://claude.ai/code/session_01HyPg3XCMC2jdUp9a2Tfr9G

> █

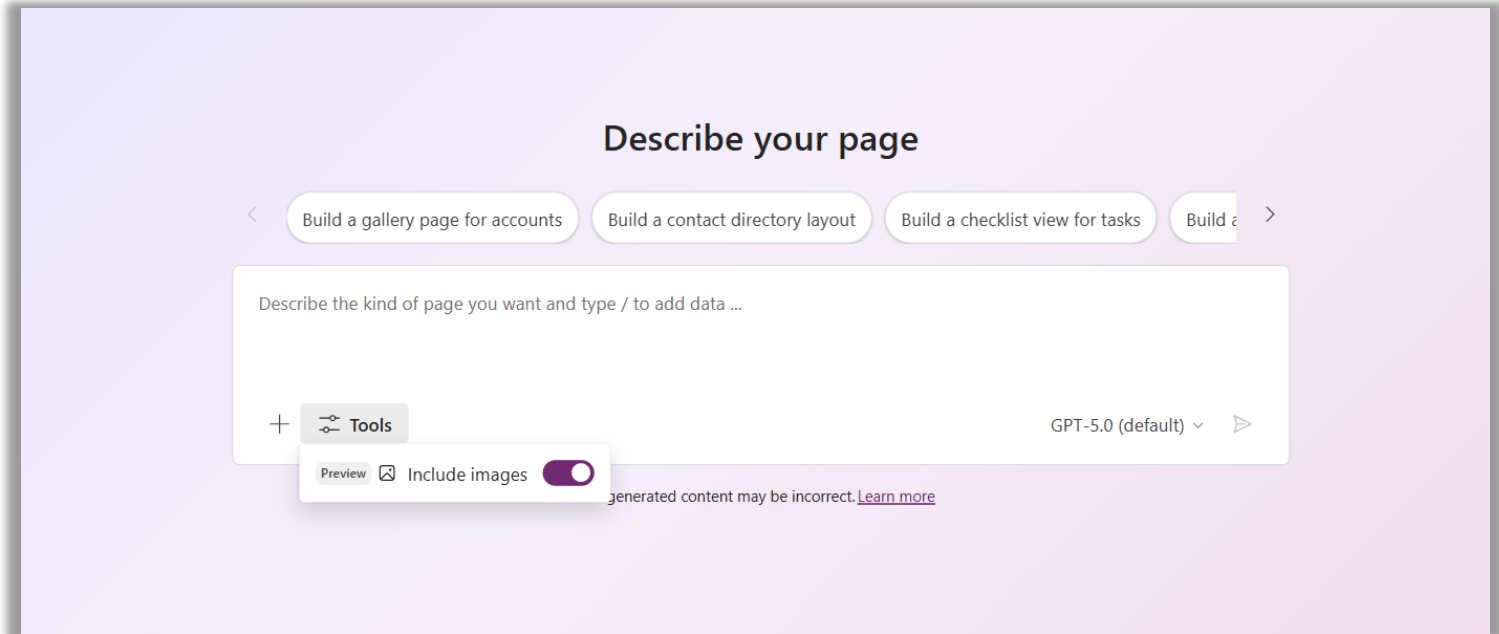

plan mode on (shift+tab to cycle)
In index.ts
medium · /effort
```

💡 Tip

This approach is the recommended path for building generative pages. It gives you access to the latest frontier AI models, works worldwide on public clouds, and lets you build multiple pages plus supporting Dataverse tables in a single run.

Features and considerations

- Can use connectors (preview)
- Can be full-page or embedded in a form
- *Include images* allows the agent to access a library of 25,000 stock images for decorative backgrounds, etc
- Can accept input parameters *recordId*, *entityName* & *data*
- Can be localised by specifying language and regional formatting for dates, etc
- Requires a Premium licence.

Pros and cons of Generative Pages

Pros

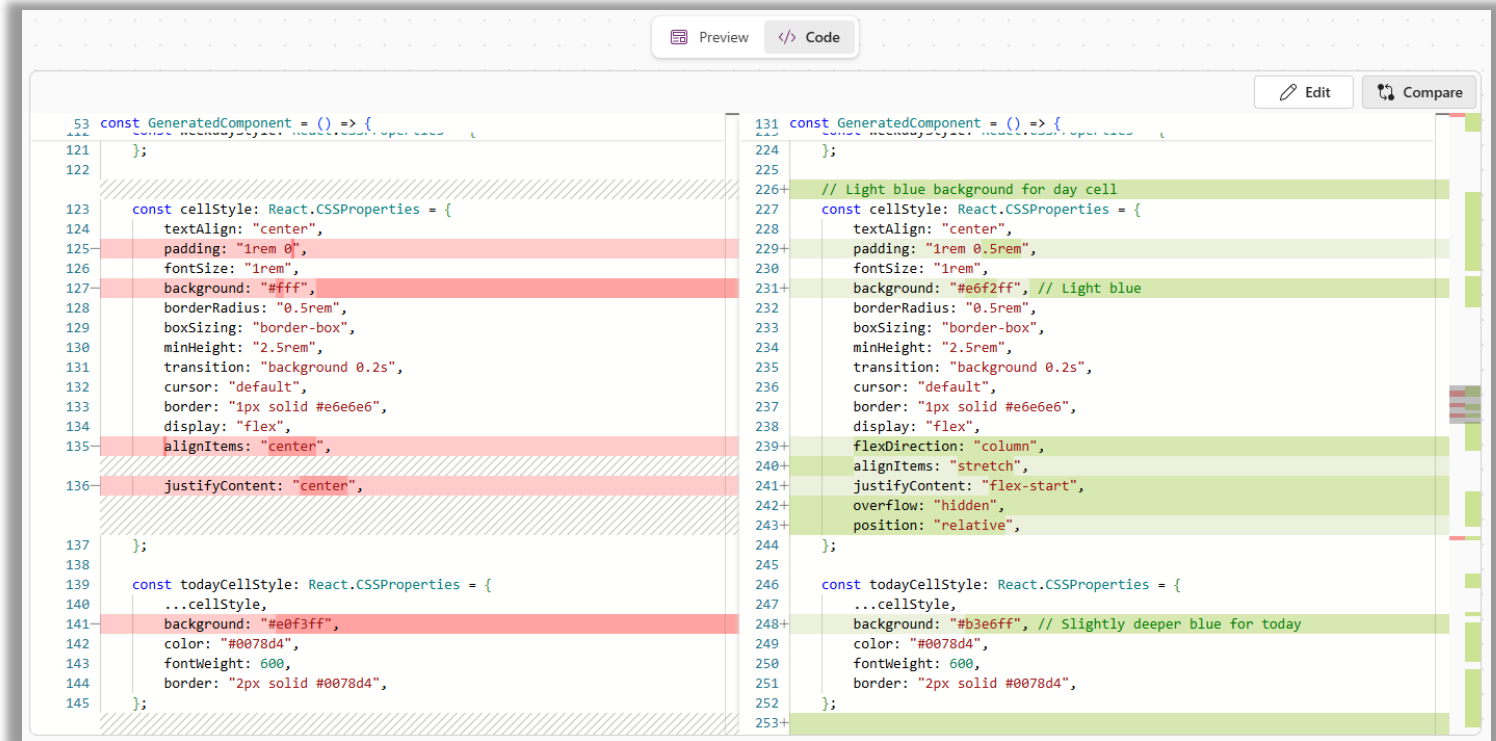

- Creates pages very quickly
- Can embed pages into forms
- Use natural language to build
- More flexible UI than Custom Pages
- Maker experience is accessible to Citizen Makers
- Using your own AI code generation tools can mean a stronger AI model
- In active development by Microsoft

Cons

- Model-driven apps only
- Dataverse, 6 tables max
- Maker experience is only available in 4 regions
- Maker experience is locked into an older AI model (GPT-4.1)
- Manual changes need pro-dev skills
- Various other limitations.

When to use Generative Pages

- You have a model-driven app
- You need to build a page quickly, e.g. for a proof of concept
- You need flexible UI options beyond what Custom Pages can easily offer, e.g. drag-and-drop.

The screenshot shows a code editor with two side-by-side panels comparing code. The left panel shows a component with a light blue background and a border. The right panel shows the same component with a light blue background and a border, but with additional styling for a 'today' cell. The code is written in JavaScript/React syntax, using `React.CSSProperties` for styling. The right panel includes comments like `// Light blue background for day cell` and `// Slightly deeper blue for today`. The code is highlighted with green and red background colors.

```
53 const GeneratedComponent = () => {  
121   };  
122  
123   const cellStyle: React.CSSProperties = {  
124     textAlign: "center",  
125     padding: "1rem 0",  
126     fontSize: "1rem",  
127     background: "#fff",  
128     borderRadius: "0.5rem",  
129     boxSizing: "border-box",  
130     minHeight: "2.5rem",  
131     transition: "background 0.2s",  
132     cursor: "default",  
133     border: "1px solid #e6e6e6",  
134     display: "flex",  
135     alignItems: "center",  
136     justifyContent: "center",  
137   };  
138  
139   const todayCellStyle: React.CSSProperties = {  
140     ...cellStyle,  
141     background: "#e0f3ff",  
142     color: "#0078d4",  
143     fontWeight: 600,  
144     border: "2px solid #0078d4",  
145   };  
146  
147   return ( 

<div> </div> <div style={todayCellStyle}> </div> </div> );  
148 }  
149  
150 export default GeneratedComponent;

```

```
131 const GeneratedComponent = () => {  
224   };  
225  
226   // Light blue background for day cell  
227   const cellStyle: React.CSSProperties = {  
228     textAlign: "center",  
229     padding: "1rem 0.5rem",  
230     fontSize: "1rem",  
231     background: "#e6f2ff", // Light blue  
232     borderRadius: "0.5rem",  
233     boxSizing: "border-box",  
234     minHeight: "2.5rem",  
235     transition: "background 0.2s",  
236     cursor: "default",  
237     border: "1px solid #e6e6e6",  
238     display: "flex",  
239     flexDirection: "column",  
240     alignItems: "stretch",  
241     justifyContent: "flex-start",  
242     overflow: "hidden",  
243     position: "relative",  
244   };  
245  
246   const todayCellStyle: React.CSSProperties = {  
247     ...cellStyle,  
248     background: "#b3e6ff", // Slightly deeper blue for today  
249     color: "#0078d4",  
250     fontWeight: 600,  
251     border: "2px solid #0078d4",  
252   };  
253  
254   return ( <div style={cellStyle}> </div> <div style={todayCellStyle}> </div> </div> );  
255 }  
256  
257 export default GeneratedComponent;

What is the Power Apps Vibe Experience?

- Use natural language to build plans, apps, and data models that are created using AI
- Creates a Code App (more on them later) using the React framework
- Uses Dataverse, can access SharePoint (read-only)
- Maker experience uses AI model Claude Opus 4.5
- Currently in preview.

Vibe Experience demo

Lab 2

00:00

mins: secs: type:

 Breaktime for PowerPoint by Flow Simulation Ltd.

What do you think of Vibe Experience?

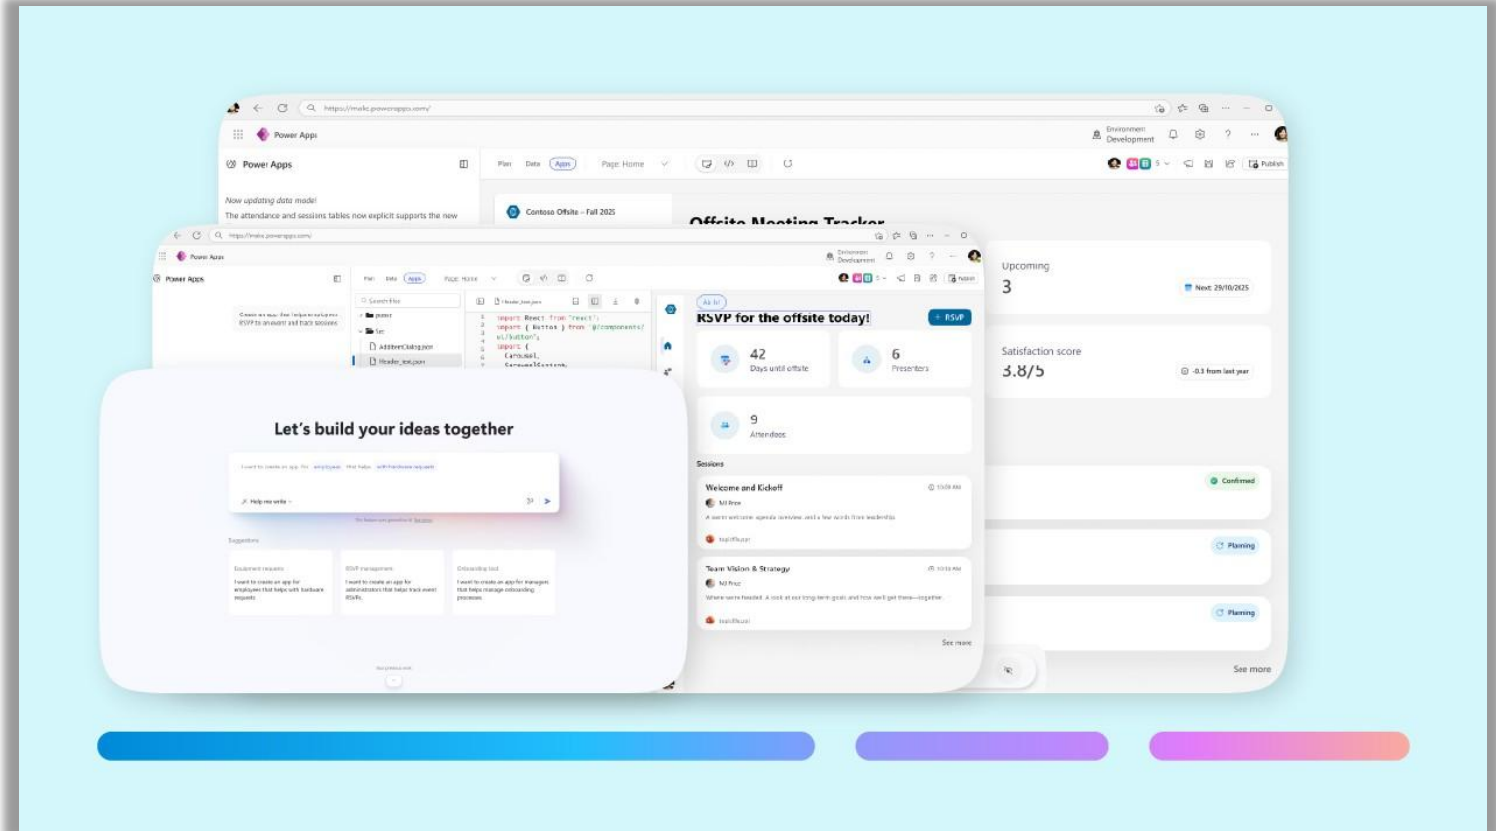

Lunch – Back at 13:00

Welcome back!

Features and considerations

- *Add work content* allows the following to be attached:
 - Files (Word or Excel)
 - Emails
 - Chats
- *Upload images* to use wireframes
- *Enhance a prompt* adds more detail to your prompt
- Requires a Premium licence.

Pros and cons of Vibe Experience

Pros

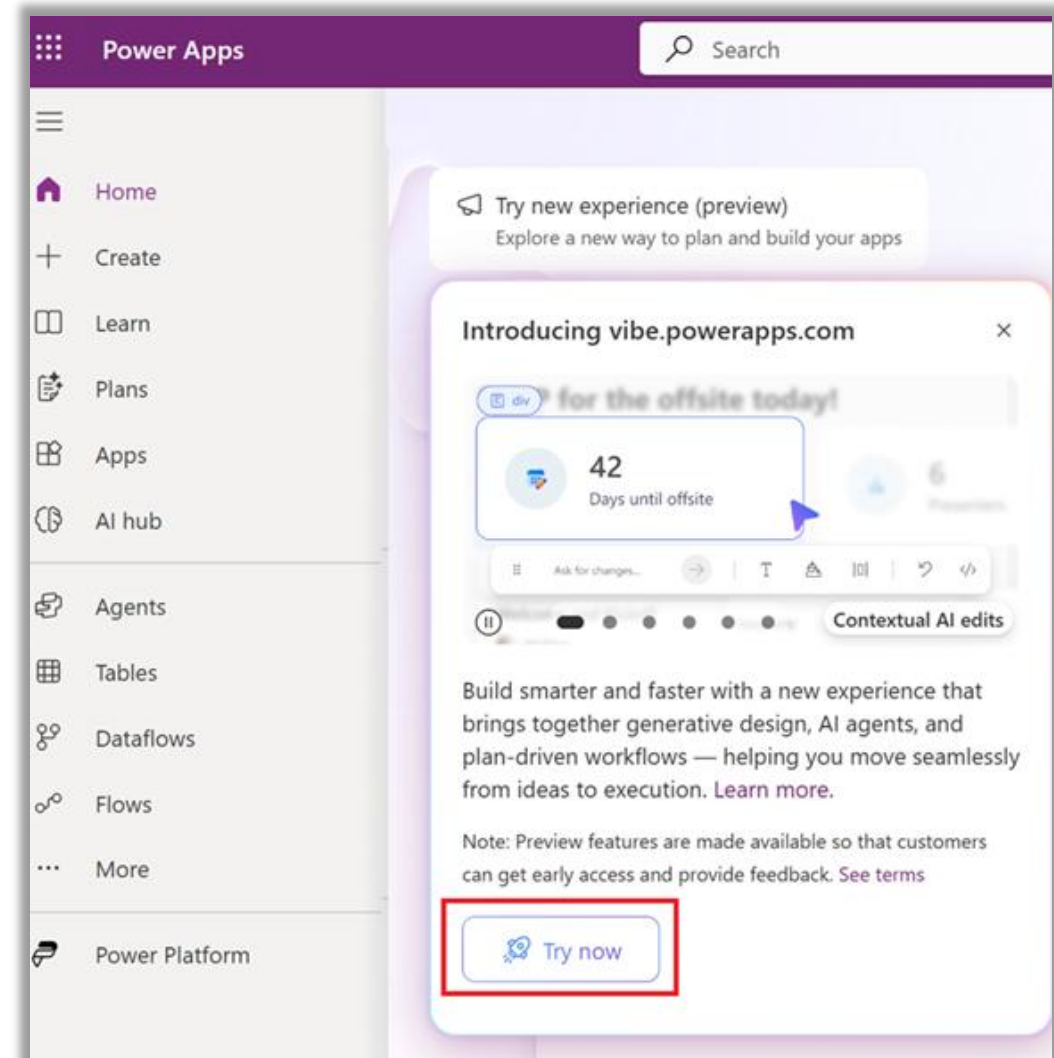

- Creates plans, apps and data models very quickly
- Use natural language (chat or voice) or inline to build
- Responsive UI by default
- Maker experience is accessible to Citizen Makers
- Vibe Apps can now be converted to Code App

Cons

- Dataverse only (SharePoint read-only)
- Cannot call connectors
- Maker experience is only available in 4 regions
- Cannot use your own AI code generation tools
- Cannot edit code
- Been in preview a long time – last update was April 2026.

When to use Vibe Experience

- You use Dataverse only
- You don't need to call connectors
- You need to build an app quickly, e.g. for a proof of concept
- You need an entire app with one or more pages
- Not for production until/if it becomes generally available.

Vibe Experience Quiz

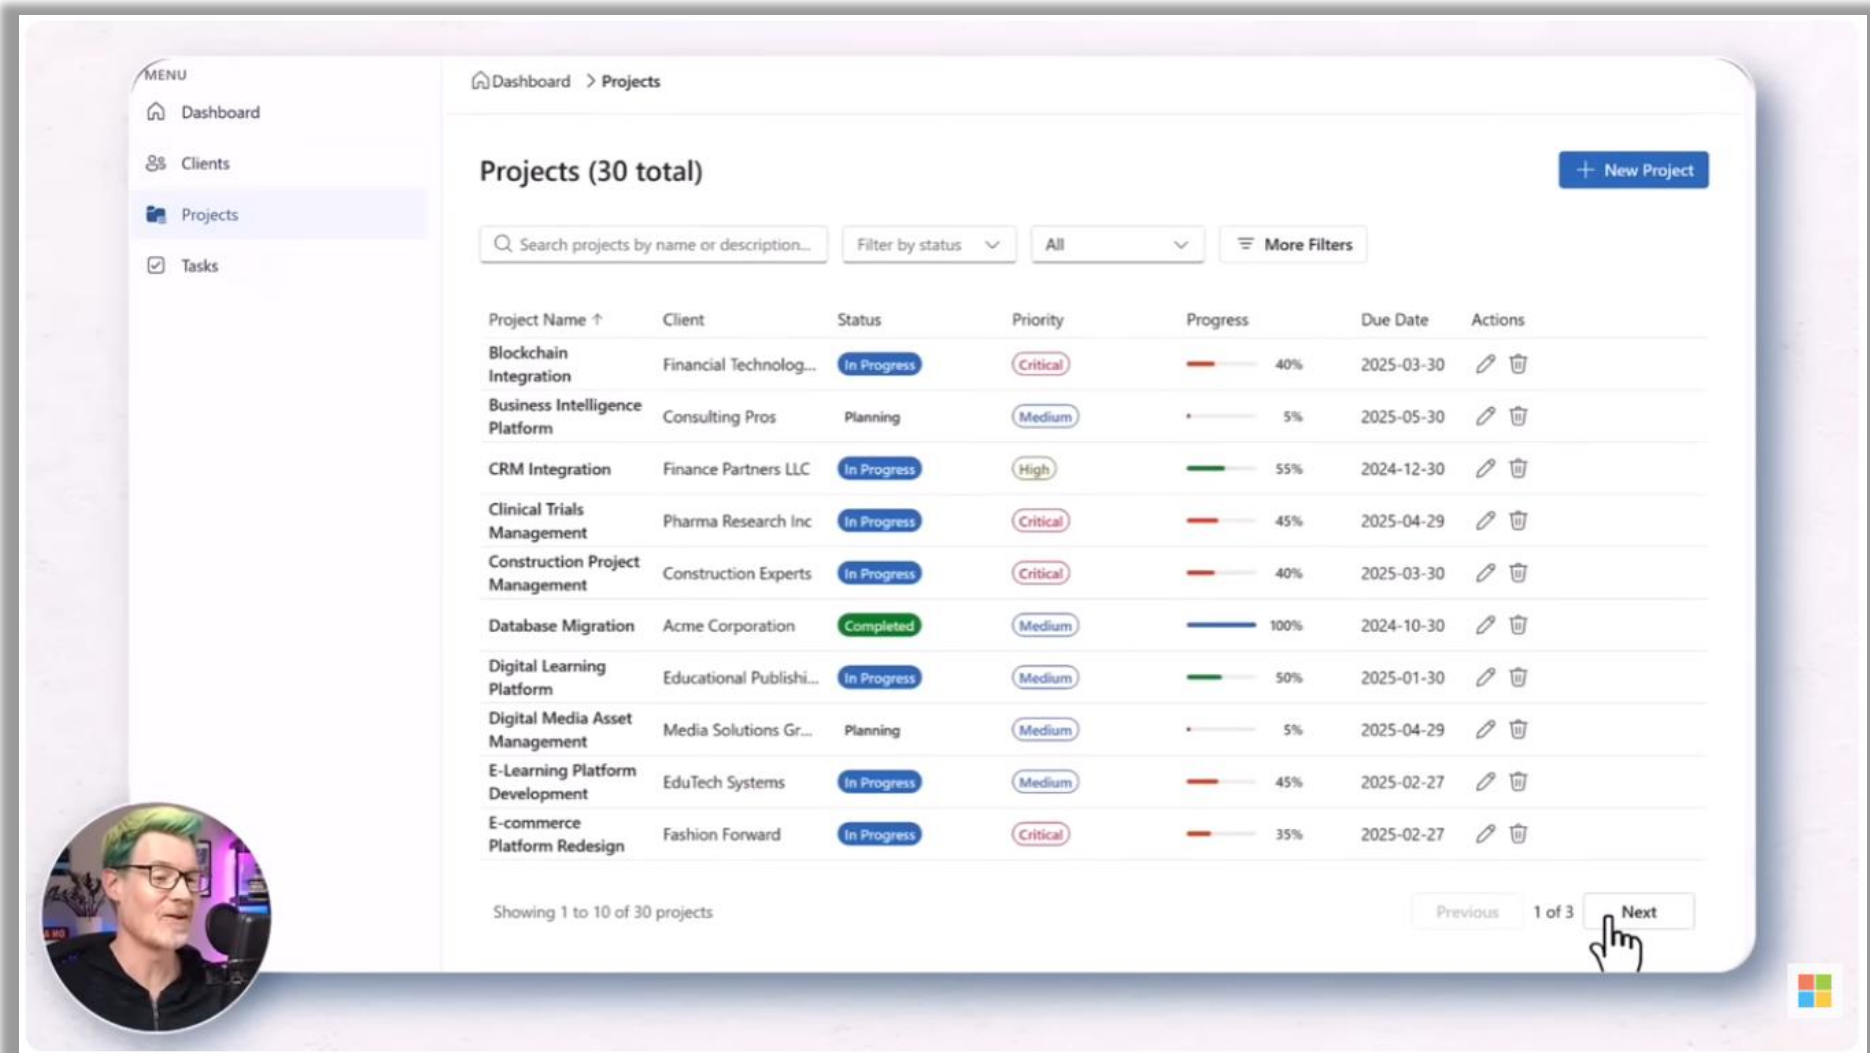

Session 3 – Code Apps

Let's see what Code Apps look like...

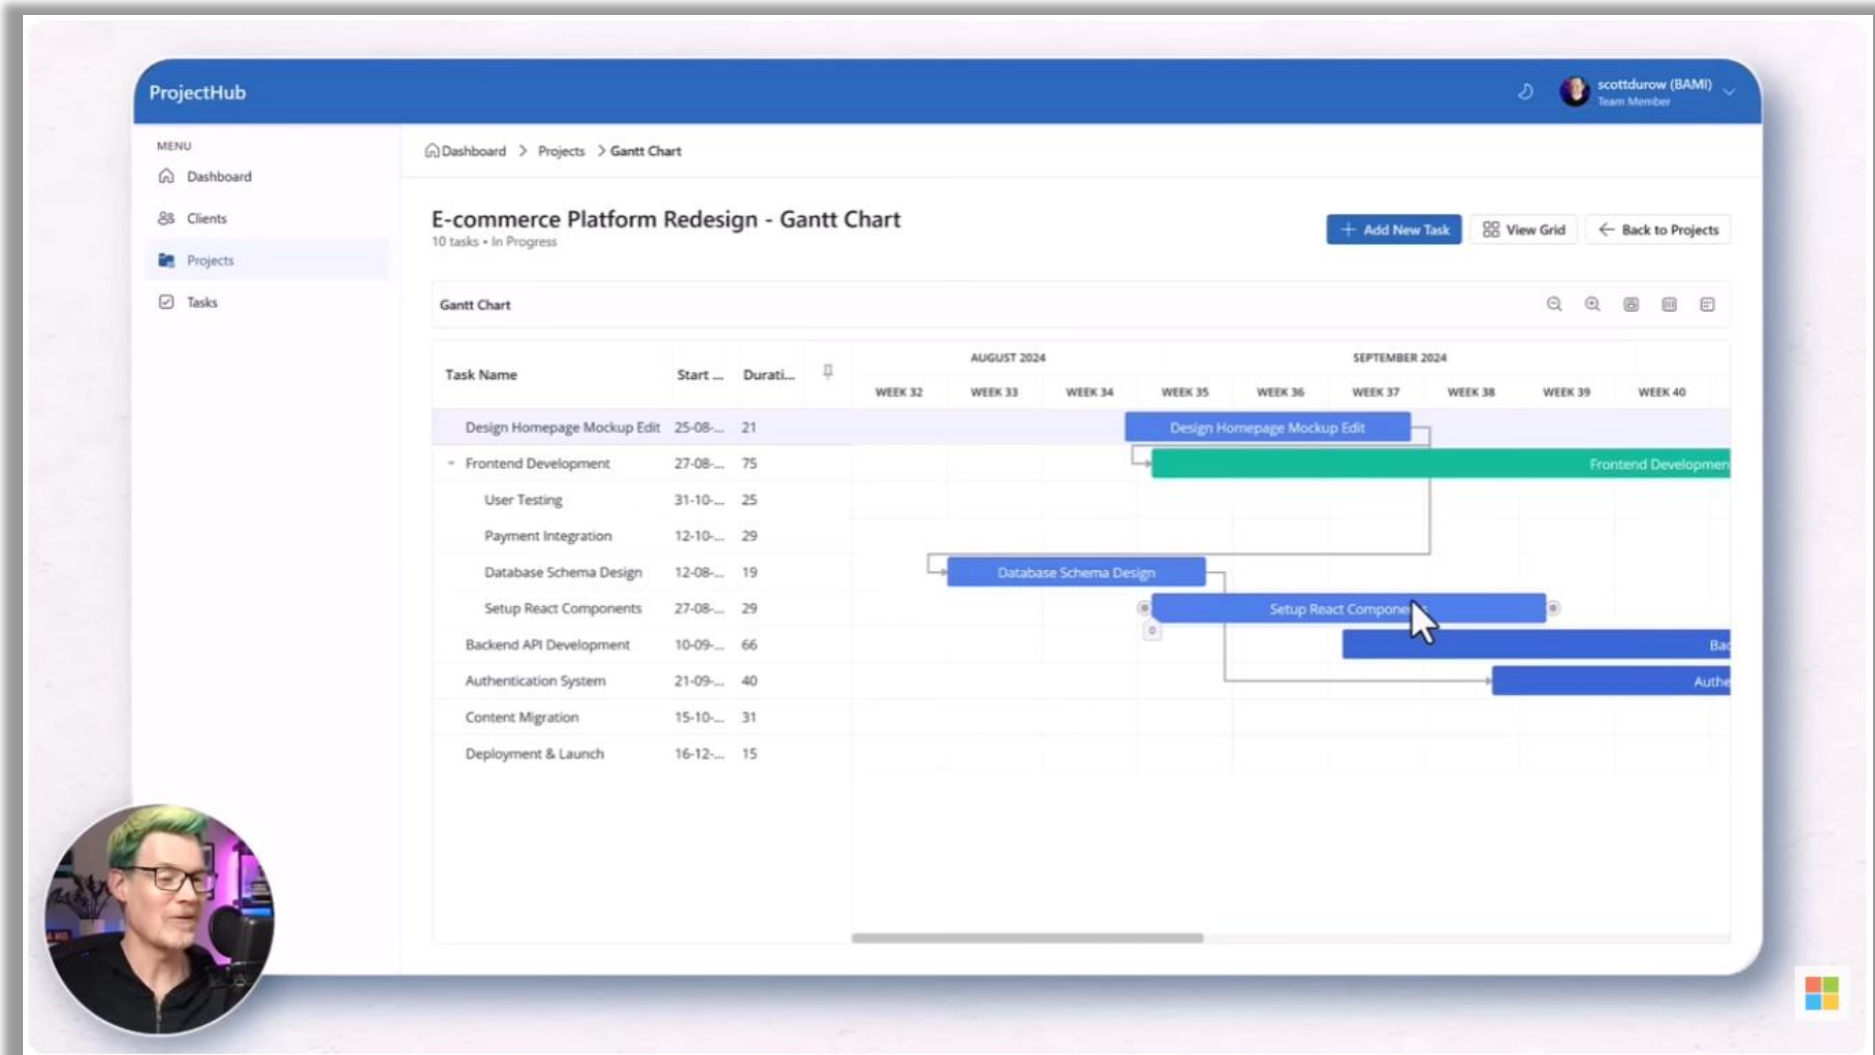

Code App example 1/4: Project Management app

The screenshot displays a web application for project management. On the left, a sidebar menu includes 'Dashboard', 'Clients', 'Projects' (selected), and 'Tasks'. The main content area is titled 'Projects (30 total)' and features a search bar, a 'Filter by status' dropdown set to 'All', and a 'More Filters' button. A '+ New Project' button is located in the top right. Below these elements is a table listing 10 projects with columns for Project Name, Client, Status, Priority, Progress, Due Date, and Actions. The projects are: Blockchain Integration, Business Intelligence Platform, CRM Integration, Clinical Trials Management, Construction Project Management, Database Migration, Digital Learning Platform, Digital Media Asset Management, E-Learning Platform Development, and E-commerce Platform Redesign. The table uses color-coded status labels (In Progress, Planning, Completed) and priority labels (Critical, Medium, High). Progress is shown as a bar chart with a percentage. The bottom of the table shows 'Showing 1 to 10 of 30 projects' and pagination controls for 'Previous', '1 of 3', and 'Next'. A hand cursor is pointing at the 'Next' button. A circular inset in the bottom left corner shows a man with glasses and a green hair filter speaking into a microphone.

Project Name ↑	Client	Status	Priority	Progress	Due Date	Actions

What are Code Apps?

- Use your own AI code generation tools to build (no maker experience), any AI model you wish
- Build using developer tools: IDE, Node.js, npm, Git, & the Power Apps CLI
- Can use 1,500+ connectors
- Generally Available as of February 2026.

The screenshot displays the 'Dataverse Demo App' interface. At the top, a purple header bar contains the title 'Dataverse Demo App' and the subtitle 'Demonstrating CRUD operations with Power Apps Code Apps'. Below the header, the interface is split into two main sections. On the left, a 'Contacts (13)' panel shows a list of sample contacts: Jim Glynn, Patrick Sands, Susan Burk, and Thomas Andersen, each with a sample email address. A '+ New Contact' button is located at the top right of this list. On the right, an 'Edit Contact' form is shown, featuring input fields for First Name, Last Name, Email, Phone, Mobile, Job Title, and Managing Partner (Account). A 'Cancel' button is positioned at the top right of the form.

What do you think of Code Apps?

Features and considerations

- Can be standalone apps or embedded in model-driven apps
- Admins need to enable Code Apps by setting an environment option
- Use frameworks React, Vue and others
- Does not support Power Platform Git integration
- In active development by Microsoft
- Requires a Premium licence.

Pros and cons of Code Apps

Pros

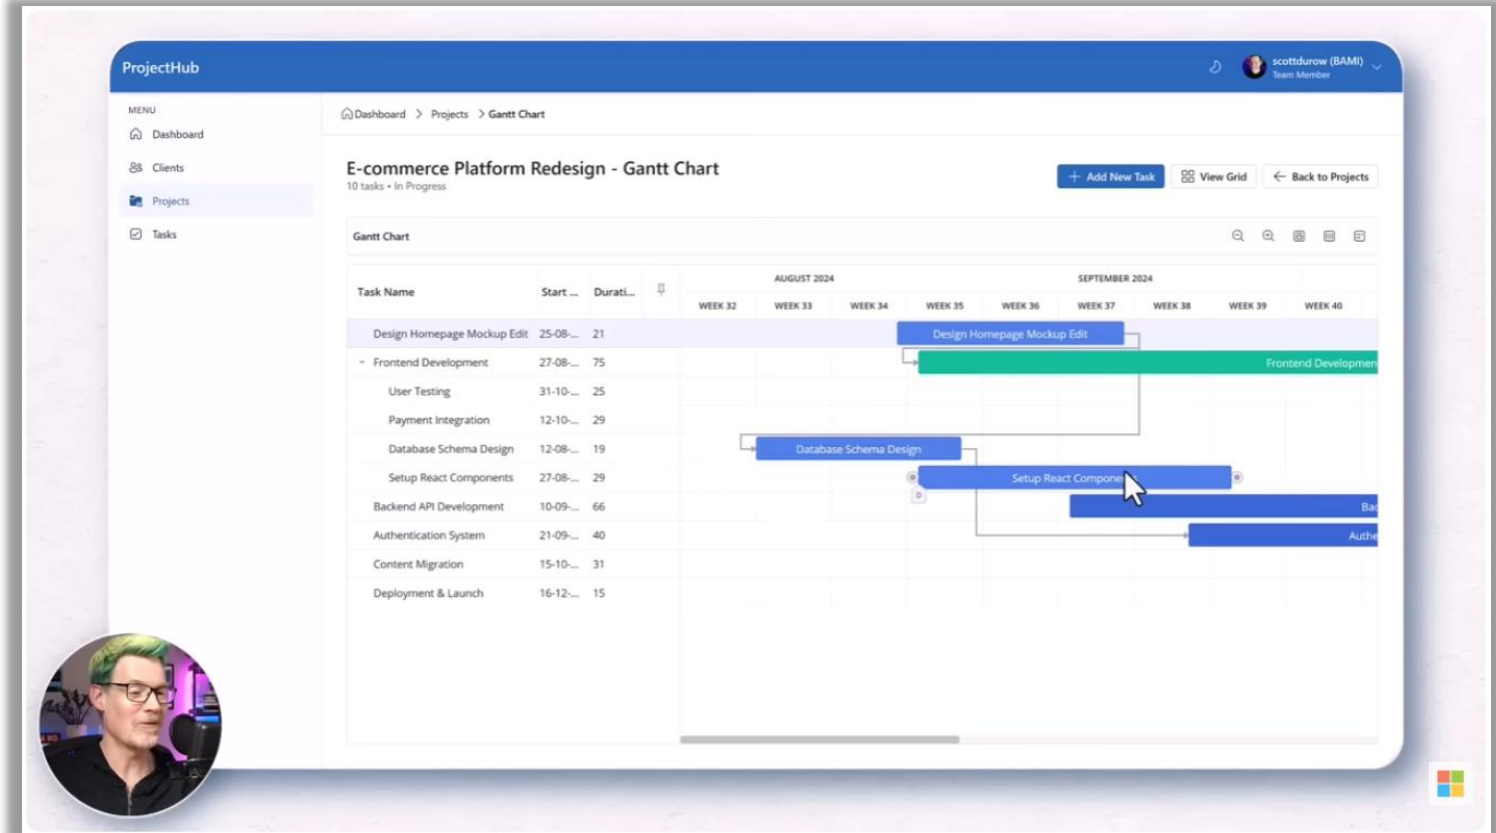

- Creates apps very quickly
- Can be standalone apps or embedded in model-driven apps
- Gives almost complete flexibility
- Can use 1,500+ connectors
- Use your own AI generation tools and use any AI model you wish
- In active development by Microsoft

Cons

- Not accessible to Citizen Makers, requires developer tools, no maker experience
- Manual changes need pro-dev skills
- Some teething issues, still new.

When to use Code Apps

- You need full flexibility
- You need to use connectors
- You are comfortable using developer tools (at least to get started).

Code Apps Quiz

Summary of everything so far

How they compare

	Generative Pages	Vibe Experience	Code Apps
App/component created	Model-driven app pages	Code Apps	Code Apps
Accessible to Citizen Makers	Yes	Yes	No
Can use your own AI code generation tools	Yes	No	Yes
Data source options	Dataverse and connectors (preview)	Dataverse and SharePoint (read-only)	Anything
Can use connectors	Yes (preview)	No	Yes
Regions available for maker experience	4	4	Any
Solution aware	Yes	No	Yes
Requires Premium licence	Yes	Yes	Yes
Release phase	Generally available	Preview	Generally available

You've seen a lot today...

Create canvas apps using Copilot

- Use Copilot in Power Apps to create a canvas app and Dataverse data model
- Describe what you want in natural language
- Work in the maker portal
- Generally available.

Create canvas apps with AI code generation tools (preview)

- You can use AI code generation tools, such as GitHub Copilot CLI and Claude Code, to create and edit canvas apps
- Describe what you want in natural language
- Uses the canvas apps plugin and canvas app authoring MCP server
- Currently in preview.

Skills overview

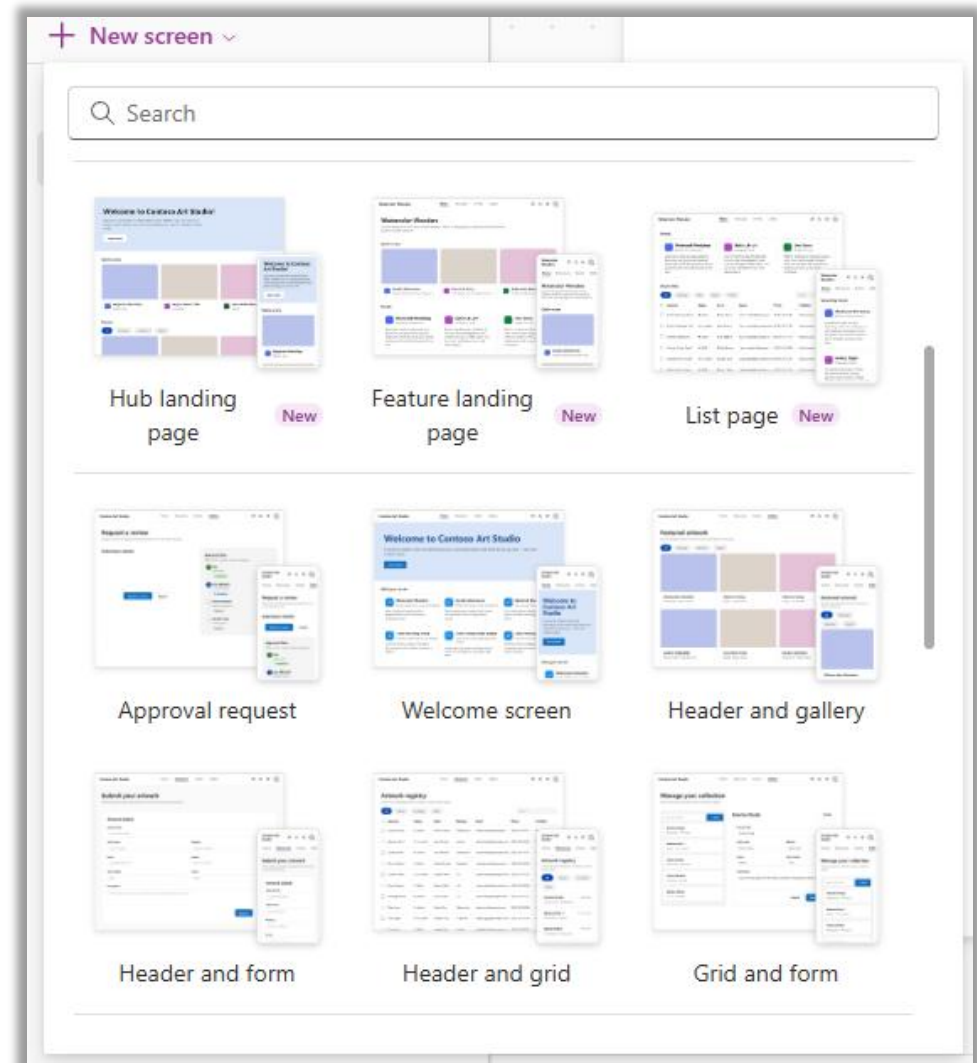

The canvas apps plugin provides these skills for working with canvas apps.

 Expand table

Skill	Command	Description
Generate canvas app	<code>/generate-canvas-app</code>	Create a new canvas app from a natural language description
Edit canvas app	<code>/edit-canvas-app</code>	Edit an existing canvas app from a natural language description
Configure Canvas MCP	<code>/configure-canvas-mcp</code>	Register the canvas app authoring MCP server with your AI tool

Canvas app responsive screen templates

- Canvas app responsive screen templates are available
- Can be a good starting point
- Options include hub landing page, welcome screen, and header and gallery.

Create model-driven apps with AI code generation tools

- You can use AI code generation tools, such as GitHub Copilot CLI and Claude Code, to create and edit model-driven apps
- Describe what you want in natural language
- Uses Power Apps plugins and the app builder skill
- Currently in preview.

What you can do with the model app builder skill

Use the skill to:

- Create a model-driven app from a description of a business scenario.
- Plan the app around user personas and the jobs they need to accomplish.
- Review the app spec and build plan before the skill writes artifacts to your environment.
- Create supporting tables, columns, relationships, forms, views, charts, and sample data.
- Create generative pages for experiences that go beyond standard forms and views.
- Create a sitemap with custom icons for each table.
- Add JavaScript validation rules to forms.
- Add security roles based on the planned personas and data access needs.
- Edit an existing model-driven app by describing the changes you want.
- Verify the deployed app against the approved specification.

Add agents to your model-driven app / agent feed (preview)

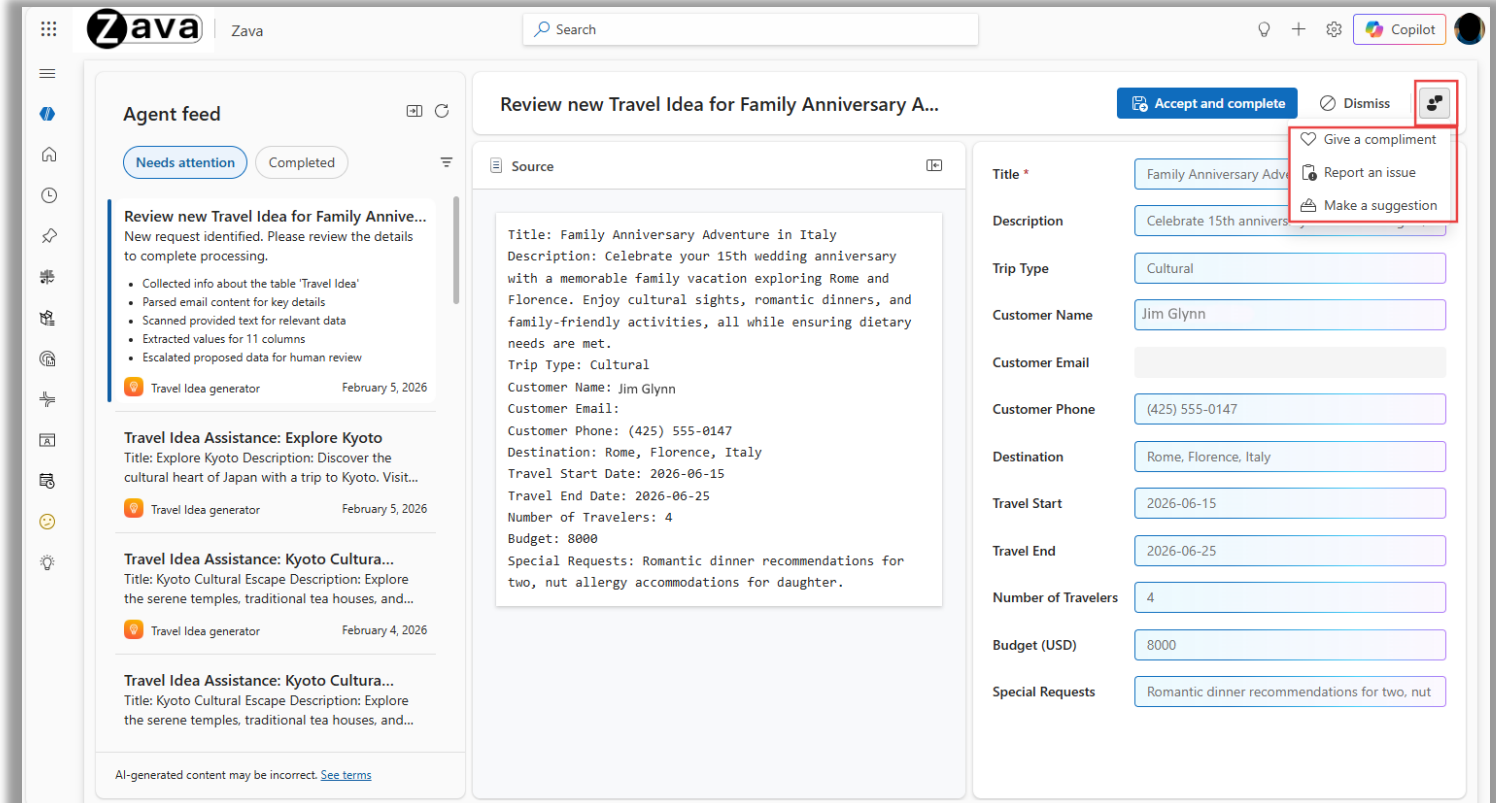

- Agents can be added to model-driven apps
- Types of agent available:
- *Autonomous agents*: Agents generate tasks for users to review results
- *App assistant agents*: Agents can provide custom topics, knowledge sources, etc
- Currently in preview.

The screenshot displays the Power Apps interface for the 'Zava Airlines' app. On the left, the 'Agents' panel is open, showing a list of agents under the 'Agent feed' section. The agents listed are: 'Travel Idea generator' (Using Power Apps MCP Server), 'Support Issue Agent' (Using Power Apps MCP Server), 'Zava Flight tracker' (Using Power Apps MCP Server), 'Flight Booking Agent' (Using Power Apps MCP Server), and '[tahoon] Rate Quote Processor' (Using Power Apps MCP Server). The 'Active Bookings' table is visible on the right, showing a list of bookings with columns for Booking Reference, Passenger, and Flight. The table contains 15 rows of data.

Booking Reference	Passenger	Flight
BR 837	Eva Brown	Zava 102
BRK 345	Alice Smith	Zava 109
BRK45	Alice Smith	Zava 109
GPT5.2	Alice Smith	Zava 109
KAR100	David Kim	Zava 109
ZA - BRK 402	Carol Lee	Zava 102
ZA - DS19	Alice Smith	Zava 109

Power Apps MCP server (preview)

- Use to allow Copilot Studio to communicate with your Power Apps
- *Automate repetitive app tasks:* Such as creating Dataverse records
- *Supervise agent activity:* Handoff control to humans for review
- Currently in preview.

Run Power App from desktop flow (preview)

- Launch canvas app from a Power Automate Desktop flow
- Pass inputs, receive outputs
- Useful for providing interaction for desktop flows such as human providing guidance for a flow
- Currently in preview.

Learn > Power Platform > Power Automate >

Run Power App (preview)

Summarize this article for me

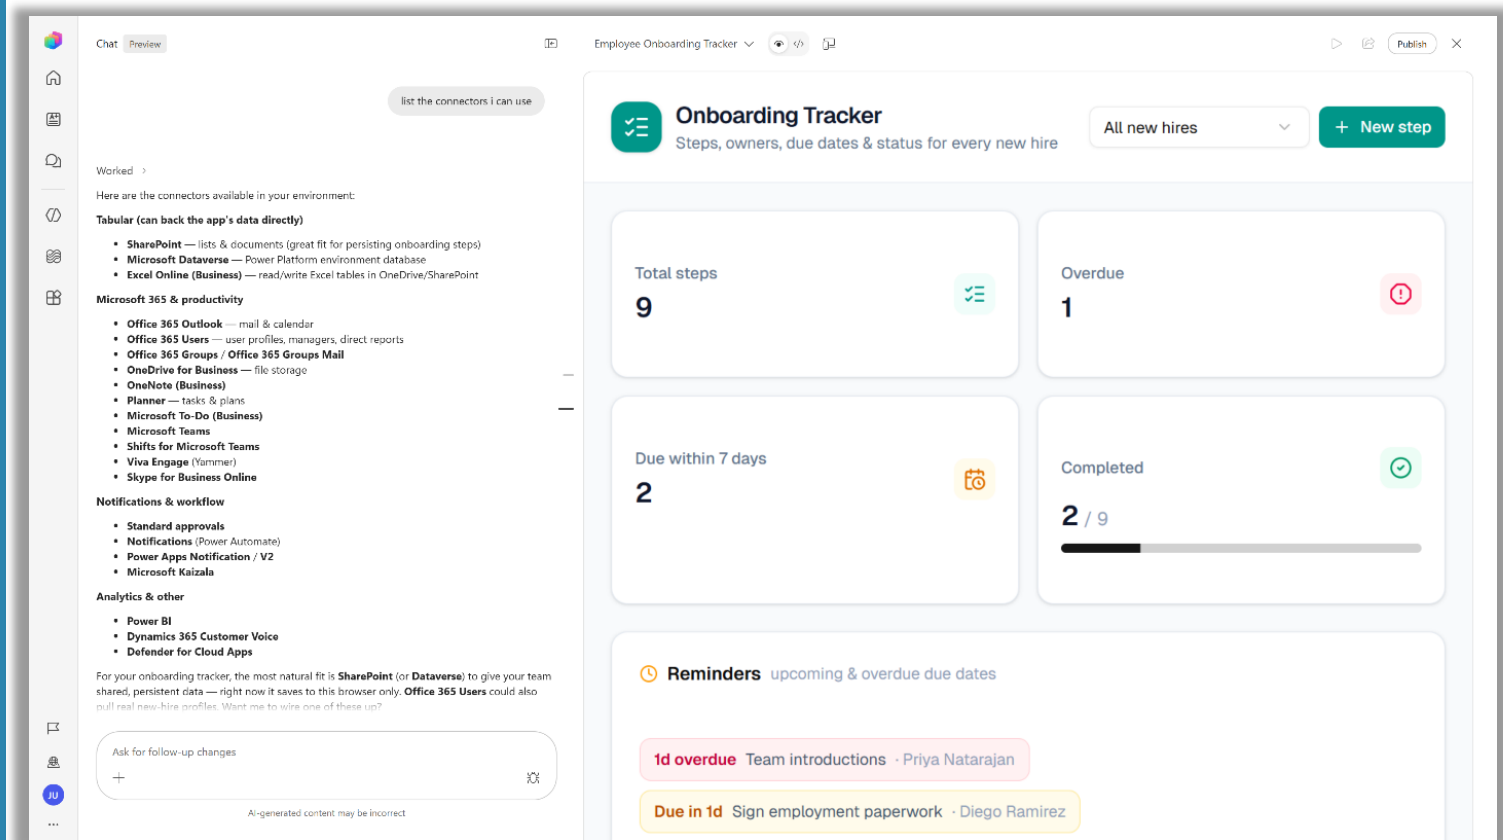

The **Run Power App** action launches an app directly from a desktop flow and establishes a communication channel between the two. By using this integration, desktop flows can natively call Power App experiences, pass inputs, and receive outputs. This approach enables rich native integration for attended automation scenarios instead of relying on UI-based automation.

With this capability, you can:

- Invoke an app directly from a desktop flow
- Call an app directly from a desktop flow.
- Pass inputs from the desktop flow into the app.
- Capture outputs from the app back into the flow.
- Trigger subflows from app events.

Build apps in Copilot Cowork and Copilot Studio (preview)

- Generate apps within Copilot Cowork and Copilot Studio
- Describe what you want in natural language
- Use connectors to retrieve data, update data, etc
- App building and running follows the usage-based billing model
- Currently in frontier/preview.

Create Power Pages applications with AI code generation tools

- You can use AI code generation tools, such as GitHub Copilot CLI and Claude Code, to create and deploy Power Pages a single-page application (SPA)
- Describe what you want in natural language
- Uses the Power Pages plugin to create site, add sample data, create web roles, etc
- Generally available.

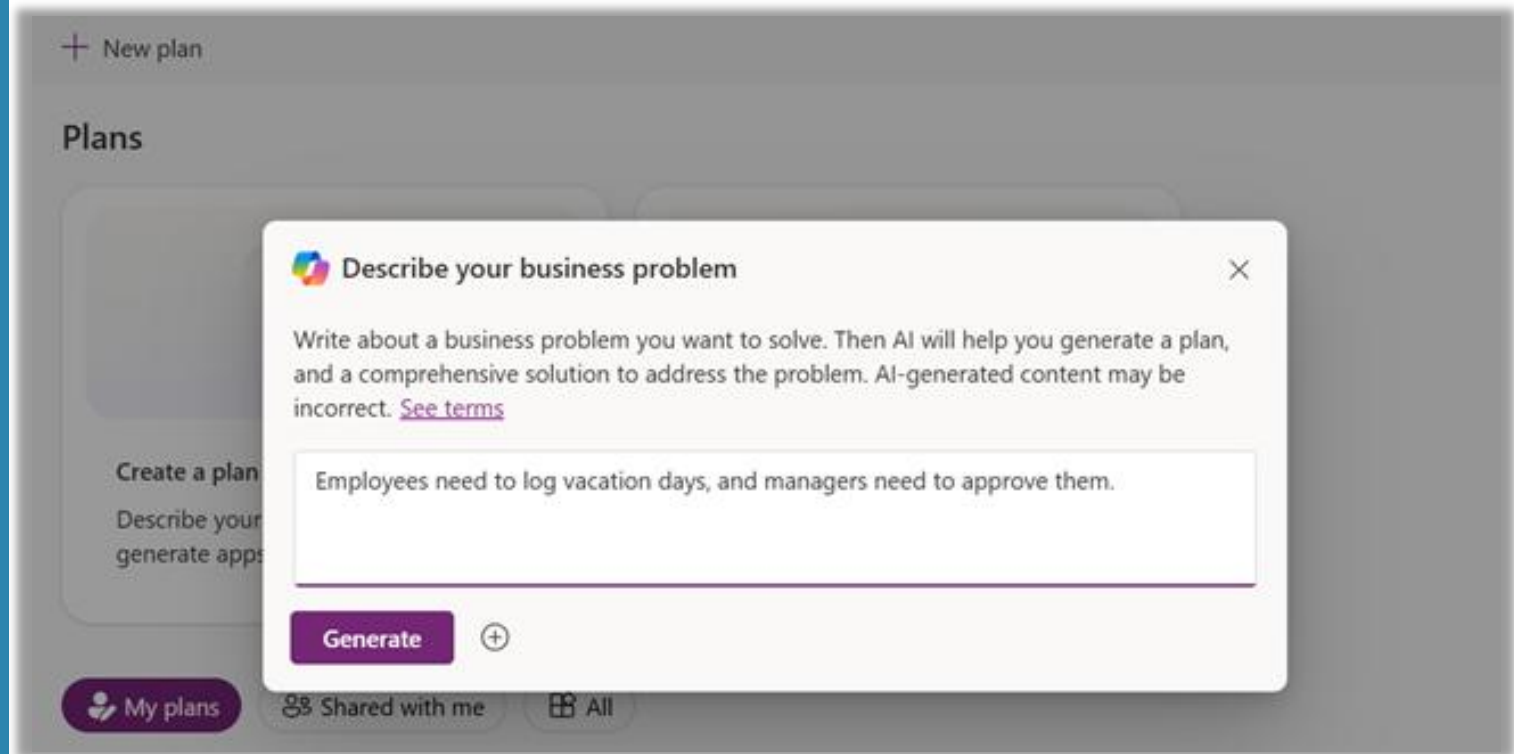

Typical workflow

A common end-to-end workflow follows this sequence:

1. `/create-site` : Scaffold, design, and build pages
2. `/deploy-site` : Upload to your Power Pages environment
3. `/activate-site` : Set up a public URL
4. `/setup-datamodel` : Create Dataverse tables
5. `/add-sample-data` : Populate tables with test records
6. `/integrate-webapi` : Generate API client code and configure permissions
7. `/create-webroles` : Define access roles
8. `/setup-auth` : Add sign-in, sign-out, and role-based UI
9. `/add-server-logic` : Add secure server-side endpoints
10. `/add-cloud-flow` : Integrate existing Power Automate flows
11. `/add-seo` : Search engine optimization
12. `/deploy-site` : Push final changes live
13. `/security-review` : Run an end-to-end security review before going to production
14. `/plan-alm` : Promote your site to test and production environments

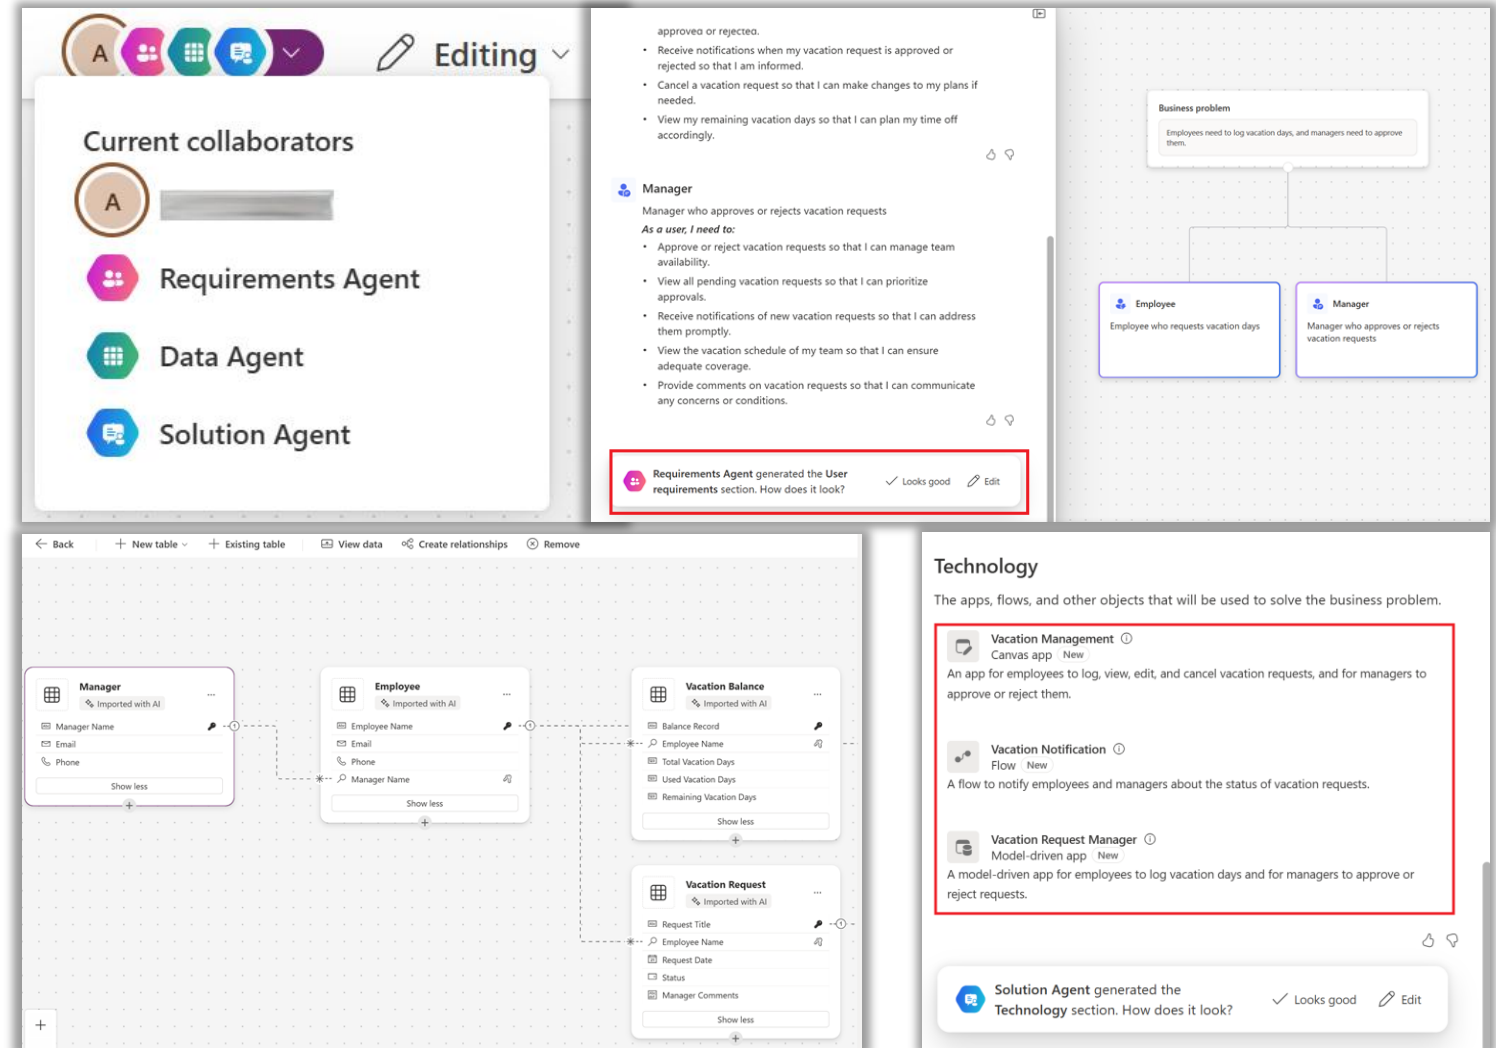

Plans

- A copilot-first tool that lets you quickly create entire solutions including:
 - User requirements
 - Data model
 - Apps, flows & AI agents
- Simply describe your business case in natural language and it does the rest.

Plans

- Uses plan agents:
 - Requirement Agent
 - Generates user requirements
 - Data Agent
 - Generates data model
 - Solution Agent
 - Proposes apps, flows, agents
- Can work in reverse to create a plan from an existing solution
- Generally available.

Two teal squares, one smaller than the other, stacked vertically in the top-left corner.

Why do you think there are so many new preview features?

Break – Back at 14:50

Session 4 – Hackathon

Hackathon objective

- Build something cool using one or more features that you've learned today
- Need inspiration? Think of a work project, a hobby, or ask Copilot!
- The winner receives 2 prizes:
 1. LEGO set
 2. A personalised 1-hour training session with me
- You've got 45 minutes.

00:04

Hackathon complete

- Post your app name & screenshot in Teams (if you can)
- Or, email your app name & screenshot to sarahguest20@hotmail.com
- In Teams, mark your favourite with 👍

Wrap-up and Q&A

Congratulations for completing the workshop! 🎉

Wrap-up

- We've learned about Generative Pages, Vibe Experience, and Code Apps
- We've learned briefly about other options available
- Remember to save and download your work, instructions are in the repo
- Lab environments will be available until Sunday 4th October.

Pro tip: Follow the wonderful Kayla Cinnamon

- Kayla is a Senior Technical Program Manager at Microsoft
- Provided amazing support for today's workshop
- Check out her awesome YouTube channel for all things AI, developer tools, and Windows productivity tips: <https://www.youtube.com/@kayla.cinnamon>.

I have a session on Saturday at 12:55

- The session is a condensed version of this workshop
- If you know anyone who you think might be interested, please let them know!

The screenshot displays two side-by-side panels from a Power App development interface. The left panel, titled 'Describe your page', features a prompt 'Describe the kind of page you want and type / to add data ...' and a 'Build' button. The right panel, titled 'Project Gantt chart', shows a timeline view of projects from February to December. A yellow arrow points from the 'Build' button in the left panel to the Gantt chart in the right panel.

Project Gantt chart
Timeline view of all projects
Budget range: \$0 - \$150,000

Project Name	Start Date	End Date	Color
Filter Data Rollout	February	May	Blue
Network Security Enhancement	March	August	Orange
Retail Store Modernization	April	September	Red
Mobile App Revamp	May	October	Blue
Resourcing Expansion	June	November	Orange
Cloud Platform Upgrade	July	December	Red
Smart City IoT Integration	August	January (Next Year)	Blue
Customer Portal Upgrade	September	February (Next Year)	Orange
Enterprise Solutions Launch	October	March (Next Year)	Red
UI/UX Service Launch	November	April (Next Year)	Red
Sustainability Initiative	December	May (Next Year)	Red
Customer Experience Analytics	January (Next Year)	June (Next Year)	Blue
